

## **EXPLORING PION AND NUCLEON STRUCTURE WITH TAGGED STRUCTURE FUNCTIONS**

Cynthia Keppel

Thomas Jefferson National Accelerator Facility, Newport News, VA, USA

Novel tagged beam and target techniques are being developed to create effective neutron, pion, and other targets from nucleon and nuclear targets and beams. The effective meson targets in particular open the opportunity to uniquely probe the structure and composition of mesons and the nucleon sea. This talk will discuss some results from the 6 GeV era at Jefferson Lab, as well as present some approved and potential tagged deep inelastic scattering experiments at Jefferson Lab in the 12 GeV era, looking forward also to the EIC.
