

RECENT RESULTS ON LIGHT PSEUDOSCALAR MESONS

Paolo Gauzzi¹

¹ Università La Sapienza di Roma e INFN Sezione di Roma, Rome (Italy)

In this talk recent results concerning the light pseudoscalar mesons (π^0 , η , η') production at e^+e^- colliders will be reviewed.

The focus will be on the extraction of the parameters describing the decay dynamics and on the tests of theoretical models that describe the pseudoscalars at low energy.

The measurement of the Transition Form Factors, that describe the coupling of the mesons to photons and provide information about the meson structure, will also be discussed.

Moreover the contribution to the search for physics beyond the Standard Model will be considered.
