

NON-PERTURBATIVE INTERACTIONS OF QUARKS AND GLUONS

Ayse Kizilersu, Jonivar Skullerud, Andre Sternback, Orlando Oliveria, Paulo Silva and Anthony G. Williams

We will be discussing the quark-gluon vertex in Landau gauge. Our results are based on two-flavor and quenched lattice QCD calculations for different quark masses, lattice spacing and volumes. We will be analyzing quark-gluon vertex in different momentum kinematics which consequently involves various combination of tensor structures.
